

The Nevada Division of Emergency Management & Homeland Security is pleased to offer:

**MGT-317 DISASTER MANAGEMENT FOR PUBLIC SERVICES (2-DAYS)
Delivered by: TEEEX**

The Disaster Management for Public Services course provides real world training to public service professionals helping to provide both the knowledge and skills necessary to protect their communities and infrastructure from potential or actual threats. During this course, participants work together in multidisciplinary teams to apply the course information with their professional experience in a variety of hands-on, small group activities, and disaster scenarios.

This course brings together emergency management personnel who are expected to identify and mitigate hazards, and who plan and manage disaster response and recovery efforts within their jurisdictions. Representatives from public service agencies, fire services, law enforcement, emergency medical services, emergency planning, public health, and hazardous materials response organizations are encouraged to attend.

Participants will be introduced to natural and man-made disasters to which public services may be vulnerable. This course also explains emergency planning and management and the regulatory systems, documents, and directives that guide disaster response. Response factors, such as hazard control zones, resources, and responder safety are also discussed. Recovery considerations, such as funding assistance and demobilization, are also explained.

Prerequisites: Participants are expected to have successfully completed IS-100, IS-200, and IS-700. These courses can be found online at: <http://training.fema.gov/IS/NIMS.asp>.

Topics: Threats to Public Services; Mitigation; Disaster Planning and Management; Disaster Response; Disaster Recovery; Public Information

Target Audience: Public works personnel; first responders; law enforcement officers; building inspectors; communications personnel; facilities management personnel; parks and recreation personnel; solid waste personnel; street and road maintenance personnel; traffic and transportation personnel; utilities (water, wastewater, electric, gas, and telephone) industry professionals.
